2. Project Description

Volunteering is one of the most rewarding ways to give back, and it's something all three of us value deeply. Having worked with community initiatives, student events, and local causes, we've seen firsthand how impactful volunteering can be. However, we also noticed a recurring problem: finding those opportunities is often harder than the work itself.

Opportunities are usually scattered across social media, physical bulletin boards, and word-of-mouth. This fragmentation makes it difficult for motivated people to find where they're needed and equally tough for organizers to reach reliable help. We realized that coordination was the biggest barrier, and not the desire to help.

Volunteer Connect was built to bridge that gap. It's a central hub where organizers can easily manage attendees, and volunteers can discover and track upcoming events. Our goal was to simplify the logistics so the focus stays on the impact, ensuring a secure, streamlined experience tailored to every user.

3. List of Functionalities

User Registration and Login

- Users can create an account by submitting their name, email, password, and chosen role (Create)
- The system reads and validates credentials against the database on login (Read)
- Passwords are hashed with `password_hash()` before being stored — the raw value never reaches the database
- Admin accounts cannot be created through the public registration form

Role-Based Access Control

- The system reads the user's role from the session on every page load to determine access
- Each role can only create, read, update, or delete records within its own scope
- Any request outside a user's permitted scope is blocked and redirected immediately

Organiser Dashboard

- Organisers can create new events with a title, description, location, date, capacity, and category (Create)
- Their event list is fetched and displayed from the database, scoped to their account only (Read)
- Organisers can update event details such as title, date, location, and capacity (Update)
- Organisers can cancel any of their own events, changing its status in the database (Delete/Cancel)

Browse Events (Attendee)

- Attendees can read all active, upcoming events from the database, sorted by date (Read)
- Each event card displays title, category, organiser, location, date, and live places remaining

Event Booking and Cancellation

- Attendees can create a booking record for any event with available capacity (Create)
- The booking detail page reads the attendee's current booking status for that event (Read)

GitHub Repo: https://github.com/saulagus/volunteer_connect

- Cancelling a booking updates its status to cancelled rather than deleting the record (Update)
- Re-booking after cancellation updates the existing record instead of inserting a duplicate (Update)

Admin Dashboard

- Admins can read a site-wide overview of all users, events, and total bookings (Read)
- Admins can update the details of any event on the platform, regardless of who created it (Update)
- Admins can cancel any event by updating its status, removing it from the active listings (Delete/Cancel)

Event Categories (extra feature)

- Categories are pre-seeded in a dedicated database table and read when creating or viewing events (Read)
- Each event is created with a category linked via foreign key (Create)
- The category name is read and displayed on each event card and the event detail page (Read)

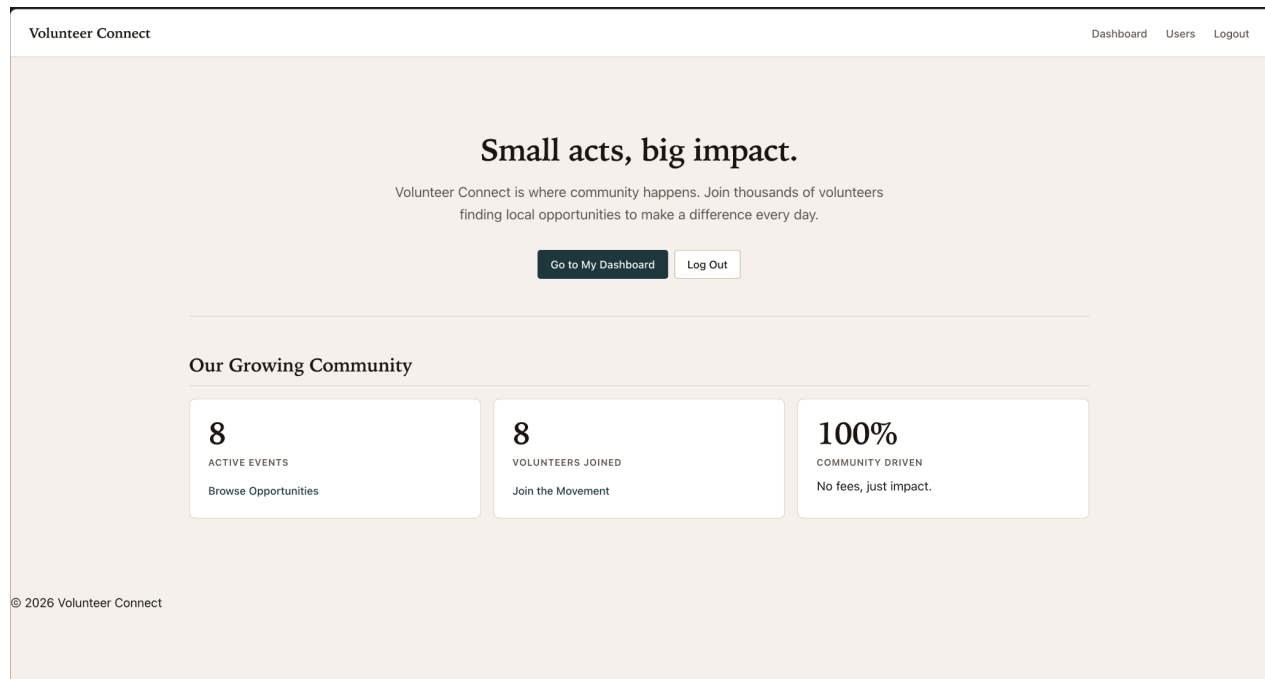

Attendee Dashboard (extra feature)

- On login, the dashboard reads and displays a live count of upcoming bookings and available events (Read)
- A preview table reads and lists the events the attendee has already booked (Read)

4. The pages

Public pages

1: index.php "Home Page - Public Landing Page"

5. Extra features and improvements, (if any)

Screenshots and a line of explanation for each.

Attendee Dashboard

Attendees have a dedicated dashboard on login that shows a live count of their upcoming bookings and available events, alongside a preview table of their booked events. This gives attendees a personalised overview rather than sending them straight to the events list.

8. Division of Labour

Summary of the division of work

If the work was split in the range of 25% to 40% per team member, that is fine and simply say, "Work was evenly divided". If this was not the case, then state with a summary sentence.

Division of work: Work was evenly divided. Divided by the strengths of each person.

Some area requires more work than others, so this is only for reference.

Filename / Task	Saul	MJ	Abdimalik
Database Design	60%	30%	10%
Database implementation	33%	33%	33%
GUI design	10%	30%	60%
GUI implementation	33%	33%	33%
Server-Side Validation/Sanitization	40%	30%	30%
