```

Visual Design (index.php)

Uses live stats by querying from database, a tutorial section, and role-based CTAs (Register / Log In).

Visual Design Code (index.php)

```
// Fetch numbers to use for homepage stats
$event_count = $conn->query("SELECT COUNT(*) as total FROM events WHERE status = 'active'")->fetch_assoc()['total'];
$volunteer_count = $conn->query("SELECT COUNT(*) as total FROM users WHERE role = 'attendee'")->fetch_assoc()['total'];
```

```
<!-- trust bar -->
<section class="trustBar">
    <div class="trustInner">
        <div class="trustStat">|
            <span class="trustNum"><?= (int)$volunteer_count ?></span>
            <span class="trustLabel">Volunteers registered</span>
        </div>
        <div class="trustDivider" aria-hidden="true"></div>
        <div class="trustStat">
            <span class="trustNum"><?= (int)$event_count ?></span>
            <span class="trustLabel">Active events</span>
        </div>
        <div class="trustDivider" aria-hidden="true"></div>
        <div class="trustStat">
            <span class="trustNum">40+</span>
            <span class="trustLabel">Community causes</span>
        </div>
    </div>
</section>
```

```
<div class="heroBtns">
    <?php if (is_logged_in()): ?>
        <?php
            // pick the dashboard link for the user's role

    <?php endif; ?>
```

Visual Design (register.php)

User registration, checking email, minimum password length, password confirmation match, duplicate email check, and role restricted to Attendee or Organiser, Admin accounts cannot be created publicly. Errors are displayed inline and form values are retained on failure.

    $stmt->execute();
    $stmt->close();

    $_SESSION['flash'] = 'Account created. Please log in.';
    header('Location: /volunteer_connect/app/login.php');
    exit();
}
```

Cookies/Sessions (login.php and logout.php)

When a user logs in, PHP stores their id, name, and role in a server-side session. Every protected page then calls `require_role()`, which reads those values and redirects the user instantly if the role doesn't match. Logout, clears session data, the cookie would get deleted from browser, and `session_destroy()` removes it from the server so no sensitive data is kept in browser.

```
if ($result->num_rows === 1) {
    $user = $result->fetch_assoc();
    // Verify the hashed password
    if (password_verify($password, $user['password'])) {
        // Regenerate session ID for security
        session_regenerate_id();
        // Store data for your group members to use
        $_SESSION['user_id'] = $user['userId'];
        $_SESSION['user_name'] = $user['name'];
        $_SESSION['user_role'] = $user['role'];
        // Close connection before redirecting
        $stmt->close();
        $conn->close();
        // Redirect based on role
        switch ($_SESSION['user_role']) {
            case 'admin':
                header("Location: /volunteer_connect/app/admin/dashboard.php");
                break;
            case 'organiser':
                header("Location: /volunteer_connect/app/organiser/dashboard.php");
                break;
            case 'attendee':
                header("Location: /volunteer_connect/app/attendee/dashboard.php");
                break;
        }
        exit();
    } else {
        $error = "Incorrect password.";
    }
} else {
    $error = "No account found with that email.";
}
```

```
<?php
// file to destroy the session and log user out
session_start();
// clear all session data on the server side
$_SESSION = [];
// remove the session cookie from the browser so there's no leftover cookie
if (ini_get('session.use_cookies')) {
    $params = session_get_cookie_params();
    // delete cookie
    setcookie(
        // use the same data as original cookie
        session_name(), '',
        // set expiration in the past
        time() - 3600, $params['path'], $params['domain'],
        $params['secure'], $params['httponly']
    );
}
// destroy the session on the server
session_destroy();
// redirect to login
header("Location: /volunteer_connect/app/index.php?msg=logged_out");
exit();
```

Private Section (attendee/events.php)

Attendees browse all active upcoming events sorted by date, showing category, organiser, location, and live places remaining. Clicking “View & Book” opens the event detail page where they can sign up, cancel, or see their booking status.

Technologies Used

- **PHP** – Server-side scripting, business logic, and form handling
- **MySQL** – Relational database with prepared statements via mysqli (no ORM)
- **HTML5 / CSS3** – Frontend markup and custom styling (no CSS frameworks)
- **XAMPP** – Local development server

Extra Feature: Attendee Dashboard

A dedicated post-login page for attendees showing a live count of upcoming bookings and available events, plus a preview table of their booked events. The brief only required event browsing; this gives attendees a personalised overview on login.

What is missing?

The website could be more appealing and fun.

If animations or additional styling were to be included, more volunteers and organizations would be more willing to use our site, as it would add an entertainment factor to volunteering.

Features to Improve

- **Search & filtering**

Attendees should be able to filter the Browse Events page by category, date range, or location, making it easier to find relevant opportunities without scrolling through all events.

- **Email notifications**

Automatically send booking confirmation emails to attendees when they sign up or cancel, and reminder emails before an event takes place.
